

Read and understand all instructions prior to using your RapidBath™ animal bathing system. Call 1-877-786-4358 if you have any questions.

Before you begin:

- Your pet will soon be enjoying the relaxing massage the RapidBath™ system provides while receiving a thorough, deep down cleaning. With experience, most pet owners find that they can completely bathe their pets in under 3 minutes! The amount of time it takes will vary based on the size of the animal, coat thickness and length, and dirtiness level.
- While the device is designed to work either inside or out, your pet will enjoy the experience even more when warm water can be used for bathing.
- You will need to use a water source that has a flow rate that exceeds 3 gallons per minute. The vast majority of homes will meet this requirement both in the shower and at an outside water faucet. Building codes limit the amount of water pressure to sinks; the RapidBath™ unit is not designed for use at the sink.

RapidBath installation:

1. **To use the RapidBath™ system outside,** attach the RapidBath™ unit directly to the end of a garden hose 50 feet or shorter. The HydroSurge® RapidBath™ hose can be used in place of a garden hose. Proceed to step 5.
2. **To use the RapidBath™ system inside,** carefully remove your current shower head.
3. The diverter that is included with your RapidBath™ unit is designed to fit virtually all standard shower pipes. In the event of a non-standard shower pipe, an adapter can be purchased inexpensively at a local home improvement store. When attaching the adapter, consider using Teflon tape to ensure a water tight seal. If you do not wish to leave the diverter in place when not using the RapidBath™ system, skip steps 2 & 3 and go directly to attaching the RapidBath™ bathing hose directly to the shower pipe using the adapter to connect the two.
4. Reattach your shower head.
5. Attach the RapidBath™ system to the other end of the hose.
6. Select the most appropriate shampoo formulation based on your animal's skin and coat condition. Insert the cartridge by inserting the cartridge opening onto the shampoo draw tube. Each shampoo cartridge is designed to provide at least 5 minutes of shampoo, or enough to bathe the standard dog 2 times. Variability in water pressure may result in substantially longer shampoo draw periods.

Bathing instructions:

1. Let your pet see and sniff the RapidBath™ unit first. This will alleviate some of the anxiety they may be feeling.
2. With the system set on slow rinse, aim the water spray behind, and away from your pet. This gives them an opportunity to get used to the sound of spraying water. Test the water temperature of the water to ensure it is a relaxing, warm temperature. Be careful to not use hot water. Now move the setting to fast rinse.
3. Move the device setting to "bathe" and within seconds, the high quality RapidBath™ shampoo will be drawn into the oxygenated water mix. Move your hand forward until the pet's rear area is getting wet. Although your pet may jump at first, soon it will be enjoying the relaxing massaging action.
4. **Slowly** move the spray pattern across the top of your pet from the tail to the neck area. Angle the spray so that it is at a 45 degree angle to lift and penetrate the hair. This will ensure a thorough cleaning down to the skin.
5. Continue the **slow, side to side motion** from the top of the animal down each side.
6. Next, clean each of the legs, underside, paws, and under tail area. Finally, you have a way to effectively clean all those hard to reach areas!
7. When finished bathing, set the RapidBath™ system to the HIGH rinse setting and repeat steps 4-6. Although no shampoo will be coming from the unit, your pet will continue to enjoy a relaxing water massage and enjoy the health benefits of getting oxygenated water right down to the skin. All RapidBath™ shampoo products are formulated to be clean rinsing and leave no shampoo residue which can dry the skin and coat.

For bathing an animal's face:

8. When face bathing is required, it is recommended that you wet the face using the LOW rinse setting on your RapidBath™ unit, ensuring that you do not spray the water directly at the eyes, ears, nose, or mouth of the animal, and that no water enters the ear canal.
9. Rub a small amount of tearless, unscented shampoo into your hands and hand bathe your pet's face just as you would your own.
10. Rinse using the RapidBath™ unit on the LOW setting just as you did in step 8.

To use a Flea & Tick or Medicated Shampoo Products:

- Both flea & tick shampoo and medicated shampoo work best on a clean animal. Bathe your dog using HydroSurge® RapidBath™ shampoo and rinse. Following the instructions on the bottle or directions of your veterinarian, hand apply the specialty shampoo. Use the RapidBath™ system to rinse as necessary.

Important Precautions:

- Never aim the spray directly at the animal's eyes, ears, mouth, or nose.
- Avoid getting water into an animal's ears.
- Do not use the RapidBath™ system on animals that are pregnant, nursing, or under 12 weeks old without the recommendation of a veterinarian.
- Leave empty shampoo cartridges on the shampoo straw until you are ready to insert a new cartridge. Should you experience any issues with shampoo congealing due to exposure to air, submerge the entire unit in warm water until the shampoo dissolves.

Installation

IN SHOWER

OUTDOORS

Attach RapidBath™ unit to end of a garden hose (for best results use hose length of 50 feet or less)

OR

1. Attach Hose to faucet
2. Attach RapidBath™ unit to Hose

Note:
Adapter is not needed outside

Bathing

INSERTING SHAMPOO CARTRIDGE

1 Depress lock on back of RapidBath™ unit and lift up compartment door

2 Push shampoo bag opening onto shampoo straw

BATHING ANIMAL

1 Turn on your water source and set the RapidBath™ unit to BATHE.

2 If used, engage the Divertor to redirect the water from the shower head to the RapidBath™ unit.

3 Press ON

4 Aim water behind and away from animal

5 Slowly approach rear quarter of animal

6 SLOWLY move the water from side to side at a 45° angle to the coat
Keep the RapidBath™ unit 4 to 6 inches from animal
Continue side to side from top to bottom of animal

7 To Rinse Body:

Set RapidBath™ unit to HIGH setting to rinse body
Set RapidBath™ unit to LOW setting to rinse delicate areas such as face, belly and under tail
Use same, slow side to side motion as bathing at a 45° angle to rinse coat
